User's Feedback

Demo the application for the use, and collected the feedback on their usage

Feedback by - Milind Mane
Position - Senior Software Engineer
Company - SUMA SOFT

"It is a promising tool to evaluate teams adopting AI coding assistants.
For developers: GitCheck encourages code ownership and ensures developers stay actively engaged with AI-generated changes rather than accepting them blindly. By promoting deeper review, understanding, and learning from code feedback, it helps developers strengthen their programming expertise, maintain hands-on coding skills, and build long-term confidence in the code they write and maintain."

Feedback by - Mandar Joshi
Position - Lead Engineer
Company - E2OPEN India Pvt Ltd

"One common challenge with AI coding tools is that they can follow instructions but not always the intended outcome, leading to autonomous code generation with limited developer control. The prototype addresses this nicely by making AI-generated changes transparent, incremental and easier for developers to understand and validate."

Feedback by - Vaibhav Chaudhari
Position - Senior Cloud Consultant
Company - Rapid Circle

"Found the tool useful in all respect as this is the major pain point in today's development environment due to adoption of AI the development time decreases rapidly but the review cycles increases and companies looking for the solution to address this, and this solution focused on the problems that a software engineer is going through"
